Courses

<https://zealous-jepsen-0001cf.netlify.app/courses>

Lessons

- I learned how to use MongoDB, which I had never used before.
- The project was excellent for practicing the backend, like Databases, Express and Node.js
- The project was also good for exploring React concepts like Hooks (useEffect, useState)
- I learned how to use Ant Design an enterprise-class UI design language and React UI library
- I learned how to use Heroku, a cloud platform as a service (PaaS) that lets companies build, deliver, monitor, and scale apps.
- I also learn about other platforms such as MongoDB Atlas and Netlify
- I learned about using Tokens for Authentication
- I learned more about using SCSS

Difficulties Arisen

- Some difficulties in the beginning connecting to MongoDB
- A lot of difficulties understanding about Tokens and how to use them
- Difficulties understanding how to use React hooks well, such as `useState` and `useEffect`
- Some minor difficulties understanding how Heroku works

Overall thoughts about the Master and the TFM

- The Master was literally a life-changing experience for me
- I got into a new World I knew nothing about and learned so much in the process
- I learned a lot about deep life lessons in the process
- I noticed a great improvement in my understanding of everything in the last project
- I could find errors and solve bugs faster than before

THANK YOU!
